Professional Summary

Research Scientist specializing in deep learning architectures for multi-modal data analysis and representation learning. Expert in designing efficient attention mechanisms with strong domain generalization, focusing on extracting signals from complex spatio-temporal data. Published in NeurIPS, BMVC, with work spanning machine learning theory and real-world applications. Experienced in merging research with deployment, leading edge-optimized AI and resource-efficient models for constrained environments. Proven success in managing cross-functional teams in high-impact projects, balancing innovation with practical implementation and compliance.

Education

Ph.D. Candidate | University College London, UK (2020–2025)

Thesis Focus: Novel Multidimensional Attention Mechanisms for Robust Domain Generalization.

- Developed multi-dimensional attention mechanisms for extracting subtle signals from noisy spatiotemporal data, with applications spanning computer vision and signal processing.
- Developed efficient multi-modal models that ensure high performance and domain generalization with reduced computational needs, allowing deployment on various computing platforms.
- Developed and validated new data augmentation methods to improve model robustness against distribution shifts and out-of-distribution scenarios.

Advisors: Prof. Youngjun Cho (✉), Prof. Nadia Berthouze (✉)

M.Sc., Cognitive Systems & Interactive Media | Pompeu Fabra University, Spain (2010–2011)

Dissertation: EEG-based Investigation of Brain Wave Entrainment by Binaural Beats & Music.

- Applied machine learning and signal processing to analyze multi-channel data, employing independent component analysis to extract patterns and evaluate temporal signal coherence.
- Designed experiments to study synchronization effects across stimuli conditions, using statistical analyses to evaluate system responses applicable to neural sensory processing.

Advisors: Dr. Sylvain Le Groux (✉), Prof. Paul Verschure (✉)

B.Tech., Electronics & Communication | Nirma University, India (2004–2008)

Key Modules: Signal Processing, Digital System Design, Modern Processor Architecture

Work Experience [Employment History]

Research Associate | University College London (2024 – Present)

- Leading research on generative AI and diffusion models for photorealistic image synthesis, focusing on novel architectures that balance quality with computational efficiency.
- Developing innovative approaches for multi-modal semantic segmentation that enhance model robustness across varying environmental conditions and input distributions.

Solution Architect -AI | Tata Elxsi (2016 – 2024)

- Led development of robust AI systems for healthcare applications, designing edge-computing solutions for dense object detection and point-of-care diagnostics that balanced accuracy with deployment constraints, resulting in three patents and successful clinical implementations.
- Managed cross-functional teams on high-impact projects exceeding \$1M, ensuring alignment between research innovations, engineering requirements, and regulatory compliance.
- Established comprehensive validation frameworks for AI systems in regulated environments while mentoring a team of 10+ AI engineers on deep learning and computer vision implementations.

Work Experience [Employment History] (continued)

- Sr. Scientist - R&D** | Azoi Inc (2014 – 2016)
 - Developed algorithms for real-time physiological sensing from multi-channel sensor data, optimizing signal processing pipelines for mobile device constraints.
 - Implemented comprehensive validation frameworks for medical device certification, ensuring system performance across diverse operational conditions.

Certifications

- 2025 **Generative AI with Large Language Models** (Coursera).
- 2019 **Executive Data Science Specialization** (Coursera).
- 2018 **Deep Learning Specialization** (Coursera).

Technical Skills

- Machine Learning: Deep learning architectures, attention mechanisms, transformers, diffusion models, contrastive learning, domain generalization, cross-modal representation learning, computer vision, signal processing
- Tools & Frameworks: PyTorch, TensorFlow, Python, C++, CUDA optimization, edge computing
- Professional: System engineering, cross-functional leadership, research-to-product translation

Awards and Achievements

- 2020 **Project Excellence Awards, Tata Elxsi**
 - Led the design of an AI-based edge imaging device for automated bacterial colony counting.
- 2019 **Hackathon Winner, Tata Elxsi**
 - AI-based medical image enhancement solution.
- 2018 Prestigious **Tata Innovista Award**
 - Point-of-care diagnostic device for malaria and sickle cell disease URL.
